

The eVO moves you!

The eVO is the only motorized therapy cycle with reciprocating handlebars and foot pedals, interlinked to effectively provide full-body coordinated movement to individuals who may not have the strength to exercise on their own. This unique “cross-patterning” motion provides therapeutic exercise that:

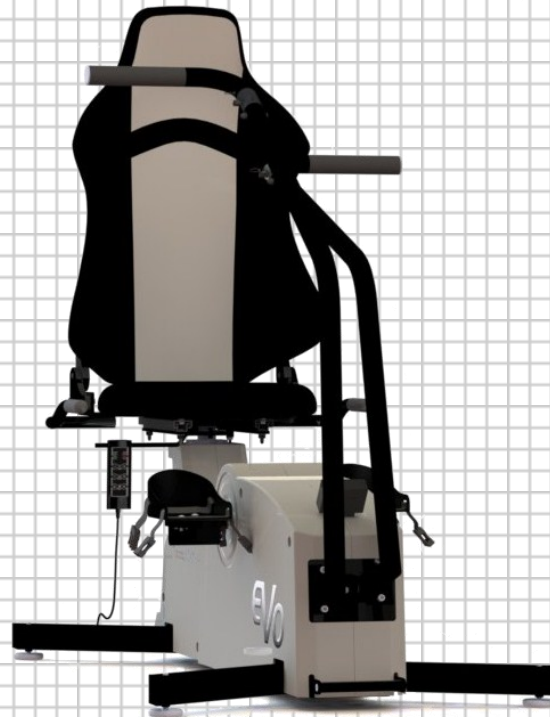

- ✓ **Prevents complications related to a physical disability.**
- ✓ **Provides advanced rehabilitation from an acute physical debilitation.**
- ✓ **Improves your general health and overall wellness.**

The eVO offers three modes of motion:

1. **“Continuous Passive Motion”** – eVO’s motor moves the user’s arms and legs in a safe, steady manner.
2. **“Active-Assisted Motion”** – eVO’s smart motor provides slight assistance to the user’s movement.
3. **“Active-Driven Motion”** – The user operates the eVO using his/her own strength.

It's Time To Get Moving!

**Powered
Full-Body Movement!**
